Digital Literacy Project Report

Name: Abhinav Mishra
Registration Number: 25BCY10254
Branch: B.Tech CSE (Cybersecurity & Digital Forensics)
University: VIT Bhopal
Course Code: CSE0001 – Digital Literacy

1. Introduction

In today's digital world, having basic digital literacy is essential for students to succeed academically and professionally. As a Student Digital Ambassador, the purpose of this project is to understand and demonstrate important digital skills such as safe internet usage, professional online presence, effective communication, and awareness of cyber threats.

This project consists of five tasks that cover different aspects of digital literacy. These tasks helped me explore various tools and platforms like GitHub, LinkedIn, and Google Forms, and understand how they can be used responsibly and effectively. The project also focuses on cybersecurity awareness, which is highly relevant in today's technology-driven environment.

---

2. Task 1 – Infographic Write-up

For this task, I created a digital literacy awareness infographic using Canva. The infographic highlights three key areas: the meaning of digital literacy, safe internet practices, and email etiquette. I selected a clean and visually appealing template and used icons and short points to make the content easy to understand.

The infographic explains that digital literacy is the ability to use digital tools effectively and responsibly. It also includes important safety practices such as using strong passwords, avoiding suspicious links, and enabling two-factor authentication. Additionally, it provides basic email etiquette tips like using a proper subject line and maintaining a formal tone.

One interesting aspect of this task was designing content in a way that is both informative and visually attractive. The main challenge was keeping the information concise while still covering all important points.

---

3. Task 2 – Digital Portfolio Write-up

In this task, I created and updated my professional profiles on GitHub and LinkedIn. GitHub is a platform used to showcase coding projects and technical work, while LinkedIn is a professional networking platform that helps in building connections and career opportunities.

On GitHub, I created a profile README that includes my name, course, and areas of interest such as cybersecurity and development. On LinkedIn, I added my education details, including my degree, university, and expected graduation year.

This task helped me understand the importance of maintaining a professional digital presence. Over the next four years, I plan to regularly update these profiles by adding projects, certifications, and achievements. This will help me build a strong portfolio for internships and placements.

---

4. Task 3 – Platforms Write-up

For this task, I explored both coding platforms and collaboration tools. I created an account on HackerRank and completed a beginner-level problem. This helped me understand how coding platforms work and how they can be used to improve programming skills.

In the second part, I created a Digital Literacy Quiz using Google Forms. The form consists of five questions related to topics like phishing, strong passwords, and safe internet practices. I also linked the form to a Google Sheet to collect responses.

This task was useful in understanding how online tools can be used for learning and collaboration. Coding platforms help in skill development, while tools like Google Forms can be used for surveys, quizzes, and data collection in academic work.

---

5. Task 4 – Email Etiquette Write-up

In this task, I learned how to write professional emails and follow proper communication etiquette. I drafted two emails: one requesting an assignment extension and another applying for an internship opportunity.

A common problem in digital communication is the use of informal language or unclear messages. For example, if a student sends an email without a proper subject line or greeting, it may be ignored or misunderstood. This can lead to miscommunication and missed opportunities.

This task helped me understand the importance of clarity, politeness, and proper structure in professional communication. Using a clear subject line, formal tone, and proper closing makes the email more effective and professional.

---

6. Task 5 – Cybercrime Awareness Write-up

While working on the cybercrime task, I researched phishing attacks and how they affect users. I was surprised by how easily attackers can create fake websites and emails that look genuine. Many people fall victim to these scams due to lack of awareness.

One important habit I will change is to always verify links and sender details before clicking or sharing any sensitive information. I will also avoid using public WiFi for financial transactions and enable two-factor authentication on important accounts.

This task made me more aware of online threats and the importance of cybersecurity practices in daily life.

---

7. Conclusion

This project helped me develop a clear understanding of digital literacy and its importance in today's world. I learned how to use digital platforms responsibly, communicate professionally, and stay safe online. The knowledge gained from this project will be useful not only during my academic journey but also in my future career.
